ERA

How easy is it to setup?

The HomeGuard Pro offers simple home security via a cloud based hub that connects to WiFi and enables set up directly via smartphone in a quick, easy to use app. No wiring to worry about or complex pairing procedures, just an easy to use app to help you make the most of your home alarm system.

Easy Set Up in 4 simple steps

- Plug In and Download the app
- Pair Hub & name it in case you want to add others later
- Pair Sensors & name them so if triggered, you know which one it was
- Choose from many flexible settings to make the alarm comfortable for you

Can I see who is in my home if the alarm goes off?

Works with WiFi HD IP Camera* which has motion detection and works directly within the alarm app.

How will I know if an alert is triggered?

An alert is sent via push or email notification to the linked smartphone the second the alarm is triggered. The alarm will then telephone any numbers stored to allow listening in/talking. (sim card not included)

Have a bigger house?

The HomeGuard Pro system is fully extendable and works with all existing ERA Alarm accessories. Pair up to 50 sensors, detectors and keypads plus 10 additional remotes.
